Please note that by signing this form, you are confirming that you have read and understood all the information overleaf.

Who is Smile 3D for?

Patients with mild to moderate malocclusions.

As the prescribing clinician, you are responsible for explaining the treatment to your patient:

- ensuring they understand the process and the length of time they will need to wear their aligners. A stop-start approach won't be effective for aligner treatment
 - patients have to be committed to treatment
- managing your patient's expectations - orthodontic treatment has limitations, particularly in adult cases and does have associated risks
- long term retention will be required once the Smile3D treatment is complete

We would highly recommend that you complete a consent form with your patient, which you can find at <https://www.jjthompson.co.uk/useful-documents>
For additional information for your patients about Smile 3D, please refer them to www.smile3d.co.uk

Completing the prescription

Please ensure you complete the prescription form fully. We will advise you during setup if we see any space issues and will suggest IPR. As the prescribing clinician, it is up to you whether the suggested areas and extent of the IPR are suitable.

Your cases are reviewed by registered technicians, who will suggest a course of treatment based on your requirements. As the prescribing clinician, it is up to you to decide whether the treatment is appropriate after reviewing your patient's dental health.

Getting started

Please make sure you fit the first appliances, as patients need to be shown how to seat and remove the appliances correctly. The patient may experience some initial discomfort during the first days of wearing their new aligners, and it's important that all this is explained on the first appointment.

The aligners must be fitted promptly once they are received by the surgery. Long delays may mean that dentition changes result in the appliances no longer fitting. If the appliances are not fitted within a reasonable time following manufacture, the laboratory will charge to remake them.

Patients need to be reviewed regularly. Before you give your patients the appliances to take home, you should book a review appointment. 4 - 6 weeks is ideal to ensure your patient is on track.

Staying on track

If your patient is due to move on to the next stage, but you find that their next aligner doesn't fit, this does not necessarily mean the treatment is off course. Ask your patient to continue to wear the last aligner for a further 1 - 2 weeks, and only after this stage would you contact the lab.

For this reason, it's important to ask your patients to keep all their aligners until their treatment has finished.

Scope of practice

Our working relationship is with you, the clinician, and we cannot speak or have any form of communication with your patients.

Payment Terms

You are expected pay for your appliances within 21 days of receiving your statement, this is regardless of whether your patient has paid for the treatment. We strongly recommend that you take a first payment to cover your lab fee on acceptance of treatment.
